

## GPS-Software add-on for GPS-Mouse

You like to monitor the terrain and position data during your test drives and trials ?

For this we offer the software add-on GPS Mouse.

### Key features:

- Display of the actual GPS coordinates
- Logging of the GPS coordinates
- Updating rate per second = 4
- Import of:
  - Longitudes- and latitudes data
  - Speed over ground
  - Height above sea level
  - Number of received satellites
  - HDOP-signal / reference for the GPS information quality (horizontal dilution of precision)

The logged GPS data can be monitored as route via the supplied software package.

The Software works only in combination with a 4 Hz GPS-Mouse.

**Order-No.: 15003**
